Qiyu (Charlie) Yang

qiyuy@andrew.cmu.edu | (+1) 417-512-3582 | linkedin.com/in/charlie-qiyu-yang | github.com/QiyuYang-QYang

Research Interests

- Representation learning from biological and sensory data: what structure a learned representation of a system should preserve
- Gene regulation as a complex system: how regulatory networks and their dynamics shape cell states, and how they change over evolution
- Task-oriented machine learning for clinical reasoning: designing and evaluating models and agents around making decisions

Education

Carnegie Mellon University Pittsburgh, PA
M.S. in Computational Biology *Aug 2025 – May 2027 (expected)*
GPA 3.93/4.33 · Coursework: Machine Learning, Deep Learning, Generative AI, Computational Genomics

Missouri State University & Southwest University Springfield, MO / Chongqing, China
B.S.A. in Plant Science and Technology, 3+1 joint dual-degree program *Sep 2021 – May 2025*
GPA 3.8/4.0 · Minor in Information Security · Dean's List

Publications & Manuscripts

[1] Shi Q†, **Yang Q**†, Huo Y†, Lin Y†, et al. SICH-Copilot: Prior-guided LLM-agent system for intelligent diagnosis and prognostic prediction in spontaneous intracerebral hemorrhage. *npj Digital Medicine* (Collection: Impact of Agentic AI on Care Delivery), revised manuscript under review. (†equal contribution)

[2] Al-Maghrabi L, Lohmann KJ, Yang F, Yang C, **Yang C** (Charlie), Pires A, Ozdoganlar B, Fonseca P, Marques PAAP, LeDuc P. A multi-actuator platform for studying detection of prey-inspired substrate-borne vibrations in semiterrestrial crabs. *Scientific Reports*, revised manuscript under review.

Research Experience

Shenzhen Research Institute of Big Data — AI Large Model Center Shenzhen, China
Research Engineer Intern · LLM-agent system for sICH outcome prediction *May 2026 – Aug 2026*

- Constructed an Assess-Optimize evaluation suite from 4,800+ LLM reasoning trajectories across an 8-configuration tool ablations, iteratively adjusted conflict and context policy to mitigate non-additive tool gains in agent.
- Ran statistical and case-level analysis of tool-failure cases, showing the performance ceiling was data-limited rather than architectural, which saved ~$12K in further tuning.
- Designed SC-RAG, a contrastive learning-based retrieval module trained with ordinal-aware triplet loss with intrinsic-dimension analysis on the mixed clinical–radiomic feature space; improved retrieval consistency from 0.765 to 0.836 and stability from 0.650 to 0.791 compared with baselines (e.g. sentence transformer embeddings).
- Re-engineered the ReAct loop into a state-machine-controlled workflow with evidence gating, state-dependent tool permissions, and schema-validated fallbacks.
- Drafted the Methods, Results, and Discussion sections of the manuscript and responses to reviewers.

University of Pittsburgh — Miler T. Lee Lab Pittsburgh, PA
Graduate Researcher · Comparative epigenomics of enhancer regulation *Jan 2026 – May 2026*

- Built an end-to-end Slurm-orchestrated pipeline (QC, alignment, peak calling, visualization) for ATAC-seq, ChIP-seq, and WGBS data across multiple mammalian species.
- Defined active enhancers by GMM thresholding of H3K4me1, H3K27ac, and ATAC signal, excluding TSS-proximal regions, and quantified DNA methylation–histone mark associations (Spearman).

Carnegie Mellon University — Philip LeDuc Lab Pittsburgh, PA
Research Assistant · Behavioral time-series analysis of ghost crab locomotion *Sep 2025 – Dec 2025*

- Developed the pause–movement index (PMI), in which each crab's annotated movement/pause bouts form a cumulative "staircase" curve, summarized by an origin-constrained regression slope; PMI was the only locomotion metric that separated stimulated from control crabs during vibration exposure.
- Built a Python pipeline that parsed heterogeneous ELAN movement/pause annotation logs into unified time series for index computation across trial periods.

Southwest University — Kun Lu Lab Chongqing, China
Undergraduate Researcher · BnaA1.CIPK6 regulatory pathways in rapeseed *Mar 2023 – May 2024*

- Processed 60+ RNA-seq samples (QC, alignment, quantification, DESeq2) and ran WGCNA with GO/KEGG enrichment linking CIPK6 expression to JA/SA signaling and carbohydrate synthesis.
- Quantified seed phenotypes with ImageJ and tested morphological differences with ANOVA and multiple-comparison procedures.

Experience

Center for Grapevine Biotechnology, Missouri State University Springfield, MO
Lab Assistant *Sep 2024 – Nov 2024*

- Developed and validated a recombinase polymerase amplification (RPA) assay for *Allorhizobium vitis*, optimizing primers to single-molecule sensitivity, and profiled virulence-plasmid markers across field samples.

Center for Crop Functional Genomics and Molecular Breeding Beijing, China
Germplasm Management and Analysis Assistant *Feb 2024 – Apr 2024*

- Determined transgene copy number in T1 maize by TaqMan qPCR and managed 1,000+ pots of transgenic maize to supply single-copy lines for T2 breeding.

Honors & Awards

Dean's List, Missouri State University 2024
Third-Class Scholarship (top 15%), Southwest University 2023
Second-Class Scholarship (top 9%), Southwest University 2022
Merit Student (3 of 85 in major), Southwest University 2022

Leadership & Service

Office of Plant Science and Technology, Southwest University Chongqing, China
Student Representative *Mar 2023 – Jul 2024*

- Coordinated teaching and evaluation between Missouri State faculty and students, contributed to English curriculum reform, and interpreted at the SWU–MSU senior seminar.

Skills

ML & AI: PyTorch, scikit-learn, AutoGluon, metric/contrastive learning, LLM agents (ReAct, tool use), RAG, ablation and evaluation design
Programming & Computing: Python, R, Go, Bash; Linux, Slurm HPC, Docker, Git, GitHub Actions, Nextflow, Conda
Bioinformatics: RNA-seq (DESeq2), ATAC/ChIP/WGBS, WGCNA, GO/KEGG, FastQC, SAMtools, HISAT2/STAR, BEDtools, deepTools
Wet Lab: PCR/qPCR, RPA, molecular cloning
Languages: Mandarin (native), English (IELTS 8.0)

Personal Portfolio

I put my selected work, writing, and photography on https://qiyuyang-qyang.github.io/.
